## Further Readings

Functions and methods are at the foundation of every Python program. The blogs, tutorials and documentation written about this topic is therefore huge. To get a concise yet detailed writeup about functions, you can head over to [TutorialsPoint](#). Methods are very related to the Object Oriented Programming (OOP) in Python. To get a taste for that, you can check out [this blogpost](#).

To learn more about how packages (or modules) work under the hood, you can go through [this documentation page](#). It's a pretty technical read, but this will give you the bigger picture. If you want to take it to the next level: the page also tells you how to create your own modules and packages in Python.
