

[Course](#) > [2. List -...](#) > [Further...](#) > Further...

Further Readings

To get a deeper insight into Python lists, you can check out the [official documentation on Data Structures](#). If you don't understand everything in there (such as the `append()` method for example), don't worry: we'll get to that soon enough.

At the end of the third video, Filip pointed out the difference between copying the list contents, or a reference to the list. He pointed out that this was only a simplified version of the story. If you're interested in the bigger picture, you can go through [this documentation page](#).
