The if-else construct is not the only control structure available in Python. There's also while and for, among others. If you want to read some more about all the control structures that Python features, have a look at [this documentation page](#). For an overview about comparators and boolean operators, you can check out [another docs page](#).

The community around Pandas is growing by the minute. As Pandas is a big thing in Python that's focussed on Data Science, there's a [dedicated website](#). There, you can read about the latest developments in Pandas and download several versions. The main author of Pandas, Wes McKinney, also included a great 10-minute video explaining the basics about Pandas.
